IMDS Releases

Release 14.0

Q4 2022 / Q1 2023

Enhancements in Release 14.0

Structure Mix

SC90 for filled/unfilled thermoplastics

Extended contact information

Revealing confidential declarable substances

Check for old MDSs

Chemical Recycling

Structure Mix

New field for usage of materials and semi component references

- Only for references on same level as component

Updated checks

- Extended check message (see box to the right) for Structure Mix including components will be removed again
- Check message „*Different types of nodes (components, semi-components, materials) are used at the same level*” will be retained
- No warning in case usage has been defined for all references

New check message since Release 13.2:

„Different types of nodes (components, semi-components, materials) are used at the same level. This is only allowed for non-article semi components or materials, which are added to a part or assembly without specific shape, surface or design. Examples: surface treatments, coatings, operating fluids or glues.“

Extended contact information

Contact person for MDS requests

- **Mandatory field like in MDSs**

Display of contact information in recipient details of rejected MDSs

- **Phone, email, etc.**

Display of default contact person in recipient details and emails

- **In case assigned contact person is deactivated or user chose not to have their contact information revealed**

Rejecting MDSs without revealing contact information

- **Confirmation to reject without revealed contact information will only be valid for one day**

Regular confirmation of default contact

- **Company administrators will be asked to confirm or update contact information of default contact person in regular intervals (e.g. ever 90 days)**

Revealing confidential declarable substances

Confidential substances becoming declarable will be automatically revealed

- No creation of new material version necessary
- Creator and affected supply chain will be informed
- Currently only concerns GADSL/SVHC substance, other regulations might follow

Joker still in discussion

- If and how joker substances (“... not to declare“) are affected is still to be decided

Background: EU Chemicals Strategy for Sustainability

- Companies ought to know as early as possible, whether they are using declarable substances
- Regular communication of MDSs often too slow

Check for old MDSs

New check message for very old MDS versions

- E.g. older than 5/10 years

Details still open

- Depends on discussion about revealing declarable substances

Chemical Recycling

New fields for portion of chemical recycling

- **Additionally to mechanical pre-/post-consumer recyclate**
- **Including option for bio-circular materials“ and sustainable share according to ISCC Plus Standard**

Release 14.1

Q2 2023 / Q3 2023

Enhancements in Release 14.1

IPC1752 Import

Improved visibility of reject reason in MDS inbox

Search for SCIP material categories by ID

Default selection of org. units

- For new MDSs
- Based on last used org. unit

Material wizard for metals

- Including check for new materials about existing identical standard materials

***) Details for all enhancements still open**
