

## 6190 IMDS administration

Among other things, security in IMDS is ensured by authorization of users who identify using a user ID, a password and a MFA method. In addition, individual areas can be equipped with different authorizations and user rights.

It is therefore important for every company to define an efficient and sensible rights and access management system in IMDS. In day-to-day IMDS work, areas of responsibility change constantly or personnel changes take place. Users and contact persons must then be created or deactivated in IMDS. Passwords have to be reset or accesses that were limited in time have to be extended. Company details can also change over time. In this webinar, you will learn how to manage your company correctly in IMDS and what specifics you need to pay attention to.

### Objective

You are familiar with the concept and criteria for efficient and secure IMDS administration. You are able to create and change an IMDS company profile.

You are familiar with the various rights and functions of the user and contact person roles in IMDS and know how to create, change and manage them.

You are also familiar with the rule for publishing material data sheets and the notification procedure in IMDS.
