

6272 Material Compliance: Annual Review, Experiences, Outlook, and Trends

Background

New international and European legislation mean that material compliance requirements are constantly changing as a result of the amended standards and reporting requirements. Companies are therefore faced with the challenge of recording material information correctly, complying with substance restrictions, and continuously adapting their processes. An in-depth overview of current developments and upcoming regulatory requirements is therefore crucial in order to minimize risks, clarify liability issues, and design forward-looking compliance strategies.

Objectives

You will be given a concise overview of key changes in material compliance over the past year. This will help you to understand the reasons behind and aims of new and amended substance restrictions and applicable reporting requirements. In addition, we will look at regulatory developments planned for this and next year and identify trends early on. We will provide you with recommendations for action and practical tips to help you identify and implement measures necessary to minimize risk and safeguard against the possibility of liability and sanctions in the future.

Topics covered

- Overview of relevant changes regarding material compliance over the past year
- Outlook for planned regulatory developments this and next year
- Recommended actions and practical tips

Teaching method

Lecture with discussion.

Target group

Material compliance specialists and officers, managers and experts from development, procurement, quality, environment, sustainability, and regulatory affairs departments who want to update and expand their knowledge and expertise.
