

The REACH Regulation governs the safe handling of chemical substances within the EU, while the Microplastics Regulation aims to prevent the release of plastic pellets throughout the entire supply chain to protect the environment from microplastic pollution.

>> OBJECTIVE

You will learn the background and objectives of the REACH Regulation and understand which areas of your operations are affected. You will know when restrictions on use and authorisation requirements apply to substances. You will be familiar with your information obligations towards customers and suppliers. You will understand the REACH process and know what actions to take if you do not receive the necessary information from your suppliers. You will learn how to implement REACH in day-to-day operations to meet legal requirements. You will also gain an understanding of the fundamentals and reporting obligations of the Microplastics Regulation and receive a clear overview of the legal requirements on microplastics. You will be provided with concrete recommendations for action regarding your products, supply chains and compliance processes. In addition, you will learn about the changes resulting from Brexit.

Your benefit: You immediately gain confidence in taking the right actions by precisely identifying REACH-relevant substances, securing your material data efficiently, and fulfilling your legal obligations with ease.

>> TOPICS COVERED

Basics

- Background and legal basics of REACH
- Substances, mixtures and articles
- The roles of manufacturer, importer, distributor and downstream user according to REACH

The REACH process

- Registration
- Evaluation and assessment
- Authorisation, approval and general restriction
- Taric classification and restrictions

SCIP database

- Objectives
- Legal regulation
- Who is required to report?
- Important information
- SCIP database versus REACH/Article 33

Reporting obligations

- Reporting obligations in general
 - Customer / Consumer
- Reporting obligations for articles
 - Definition of an article according to REACH
 - Customer / Consumer

Implementation in the company

- Affected departments
- General notes on implementation
- Use of the IMDS as an example in the automotive industry
- IMDS material data sheet as information basis for material composition
- How to set a REACH contact person in IMDS
- SVHCs in IMDS
- Checking your own and incoming MDSs regarding SVHCs
- Automotive Industry Guidelines (AIG) to REACH

The Microplastics Regulation

- Fundamentals of the legal framework
- Reporting obligations

BREXIT and UK REACH

- What has changed?
- What should EU companies do?
- UK REACH for British companies
- UK REACH transition periods

Notes on information sources

Conducted by:
imds professional GmbH & Co.KG
Waschweg 3
61276 Weilrod (Germany)

Teaching method

Lecture with discussion and practical exercises

Duration

360 min. (6 hours)

Max. number of participants

14

>> TARGET GROUPS

IMDS users, REACH officers and REACH contact persons

>> PREREQUISITES

Basic knowledge of materials

>> TRAINING DOCUMENTS

You will receive a copy of the accompanying presentation (PDF).

>> PUBLIC TRAINING

Current prices and dates can be found on our website:

www.imds-professional.com

>> EXCLUSIVE TRAINING

You can also book this seminar exclusively.

Your advantage: You determine the location, date and number of participants and can set priorities.

>> CERTIFICATE OF PARTICIPATION

You will receive a personalized certificate of participation.
